Let's Start!

Backup and Recovery Features

Learning Outcome:

Exchange written and spoken information on principles, concepts, data base objects related to query analysis, and data base engines.

Describe relational database, its concepts, and principles in spoken or written texts.

Can Do Statements:

- I can talk about the purpose of the backup and recovery strategy.
- I can discuss ideas about implementing a recovery strategy.

Ask your partner:

- How can you recover the files from a data loss?
- What are the benefits of having backups?

Let's Explore!

Linda and Thomas talk over the benefits of backups.

Instructions: Read the text below.

Thomas: Honestly, I don't see the importance of having backup and recovery strategies. Having a copy in a cloud should be enough.

Linda: Bear in mind, that there is always a chance of failure, and big companies or businesses that have tons and tons of information need to protect themselves against a possible data loss; that's why backups are cornerstones for them.

Thomas: Well, that's true, but if they have too much data to protect, how can they even do it?

Linda: There are some strategies and programs they can use. The first is RMAN, it stands for Recovery Manager, and the second one is the User-managed backup and recovery; they have slight differences.

Thomas: Which ones?

Linda: RMAN focuses on performing backups and recovering activities by using a repository of historical data. User-managed is more centered in using a mix of host operating system and SQL recovery commands. RMAN is preferred over user-managed because it has more tools, like incremental backups, block media recovery, unused block and binary compression, and encrypted backups.

Thomas: If what you are telling me is true, I'd always choose RMAN.

Linda: Well, regardless of your choice, you can also create physical backups; they can even be imported. Also, in Oracle Database, you can use the Oracle Flashback technology. It doesn't depend on RMAN either; it depends upon undoing data and records when databases are updated.

Thomas: But what about a program to see if there have been data losses?

Linda: There is one, it is called Data Recovery Advisor. It diagnoses persistent data failures, and it even gives you options to do the necessary repairs; it can also execute them if you order it to do it.

Thomas: Well, if there are so many strategies and programs used to recover the data, it must be a pretty big deal.

Let's Practice!

Backup and Recovery

Instructions: Read the statement. Circle all the correct answers. Compare your answers with your partner's. Discuss.

Which of the statements bellow refer to purposes of backup and recovery?

1. We use those Oracle features to prevent losing our information.
2. I want to generate a new database, with some specific information.
3. The manager agreed to make a copy of the data.
4. I expect to make a diagnosis of my system using Oracle features.
5. We happened to restore some files back the desk.
6. I learnt how to create objects out of a database.
7. The programmer decided to extend the data storage limit.

Let's Practice!

The Importance of Backup Tools

Instructions: circle the correct answer. Share your answers with the class.

1. Which statement happens to be the best definition of backup? Hint: for protecting your information
 - a. A device for storing data.
 - b. A system to handle data.
 - c. A copy of data.
2. What is the recovery manager expected to do? Hint: a backup and recovery tool
 - a. It helps you to see flashbacks from the previous data settings.
 - b. It's a tool you use to back up, restore and recover data.
 - c. It's a tool you use when you want to modify objects.
3. What can you with SQL media recovery?
 - a. With SQL data recovery you get to recover the control files.
 - b. SQL media recovery asks you to lock your data.
 - c. SQL media recovery helps you to keep your media files safe.
4. What's the flashback technology feature for?
 - a. For creating flashbacks of previous data modifications.
 - b. b. Use it for saving your data.
 - c. c. Keep your files organized with the flashback feature.
5. What's the flash recovery area expected to do? Hint: an area for backup
 - a. It's expected to create objects out of data.
 - b. It's expected to store data automatically in the hard disk for backup and recovery.
 - c. it's expected to decentralize data for recovery.

Extension Activity

Backup and Recovery

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Choose your favorite backup and recovery tool.
- Write sentences explaining why that tool is your favorite.
- Make a tutorial explaining how to use that tool.

Self-Assessment

Yes

No

- I talk about Recovery and backup.
- I explain why it is important to use those tools.
- I talk about my favorite backup and recovery tool.

☐ ☐
☐ ☐
☐ ☐

Target Words

- **honestly** (adverb): with honesty
e.g. Honestly, I don't see the importance of having backup and recovery strategies.
- **big deal** (idiom): an important event or fact
e.g. If there are so many strategies and programs to use to recover the data, it is a pretty big deal.
- **cornerstone** (noun): the pillar or foundation for something
e.g. They need to protect themselves against a possible data loss. That's why Backups are cornerstones for them.
- **regardless** (adverb): with no care for something, independent of
e.g. Regardless of your choice, you can also create physical backups, they can even be imported.
- **encrypted** (adjective): when a program or application has strong codes that prevent it from being hacked
e.g. RMAN is preferred over user-managed because it has more tools, like incremental backups, block media recovery, unused block and binary compression, and encrypted backups.

Learning Points

Verb + To

In English, many verbs must be followed by the **infinitive** form of the verb.

When you are speaking in English, you will see that many verbs have to use **to** after the verb.

This is a chart showing the most common verbs that must be followed by the infinitive form of the verb.

Agree	Happen
Ask	Hope
Decide	Learn
Expect	Promise
Get	Want

Example: *I **want to** learn more about having backup and recovery strategies*

Examples

- *They need to protect themselves against a possible data loss*
- *If they have so much data to protect, how can they even do it?*
- *It should be enough to have a copy on a cloud, and that's it.*

Verb + ing after prepositions

In English, a verb after a preposition must be in **ING**.

There is a special rule in English, if there is a verb after a preposition, the verb must be in its **-ing form**.

These are one of the most common prepositions.

On	By
In	Since
At	For
From	Before
Until	After

Example: *RMAN focuses **on performing** backups and recovery of activities.*

Examples

- *I don't see the importance of having backup and recovery strategies*
- *RMAN focuses on performing backups and recovery of activities using repository of historical data*
- *User-managed is more centered in using a mix of host operating system and SQL recovery commands*
