Let's Start!

Manageability Features

Learning Outcome:

Exchange written and spoken information on principles, concepts, data base objects related to query analysis, and data base engines. Describe relational database, its concepts, and principles in spoken or written texts.

Can Do Statements:

- I can mention some manageability features offered by Oracle databases.
- I can go over some characteristics of manageability features offered for Oracle databases.

Ask your partner:

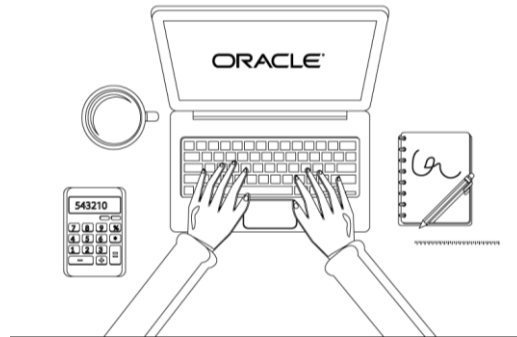

- What tools or software can we use to handle and manage huge databases?
- Is any of those Oracle tools superior to the others? Explain.

Let's Explore!

Here is an Expert talking about the different tools and software for manageability.

Instructions: Read the text below.

Don't you think that Oracle Database is simply amazing?

Database administrators are in charge of creating, operating and monitoring the oracle databases, but, in this lesson, we are going to **cover** some features offered by Oracle that would help you to administer your database. We will list them below and momentarily explain their purpose.

Self-managing database

Your database can be **programmed** to automatically make routine tasks in order to reducing the complexity of space, memory storage and administration. You can set it to activate: undo management, recovery manager, server memory management, **among others**.

Many of the manageability features can be fixed to work automatically, these are:

Automatic maintenance tasks: it allows **scheduling** tasks such as statistics collection and space recovery.

Automatic storage: management of files can be **simplified** to **rebalance** the storage according to your needs.

Automatic database diagnostic monitor: performance analysis can be easily done for any period of time in the system, it helps to find the **root** of any issue as well as proposing a solution to it.

Other features of Oracle Database are:

Oracle Enterprise Manager: as a client, you can use this to administer the environment of the databases, the servers, the applications and services. It can be used even to modify and tune multiple databases.

SQL Developer: It's a graphical tool **designed** to allow you to **browse**, create, edit and delete database objects. It is useful as well to create and view reports.

SQL Access Advisor: Similar to the SQL tuning, but this one concentrates on schema modifications, ideal to organize the indexes.

Scheduler: It is made of a collection of functions and procedures that lets administrators and developers to control when and where several tasks would **occur**.

It sounds a little hard at the beginning, but aren't you looking for giving them all a try?

**Let's Practice!**

Oracle

Instructions: Read the text and underline all the passive modals. Check your answers with your partner. Discuss.

Oracle databases have lots of tools that can be used to facilitate our work with databases; those tools must be downloaded and set up depending on users' needs. Among the most useful tools that can be utilized, the self-managing database configures the database any way we want; this can be done easily with the instant client tool deployment of the full Oracle Version. Finally, the automated maintenance can be set when a routine maintenance must be performed.

**Let's Practice!**

Best Tools Ever

Instructions: Proofread the sentence. Cross out the wrong words. Write the questions on the lines provided. Use capital letters when necessary. Use: don't you, don't, didn't, don't, didn't

1. Not you know how to upgrade the system automatically?

2. Did no the automated tool make a backup before the upgrade?

3. Do you think the automatic maintenance is set by itself?

4. Does he know you could do that with the diagnostic repository?

5. Why you don't use the SQL tool?

Extension Activity

Oracle

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for more features of Oracle and select your favorites.
- Write a text explaining why you like those Oracle features, use the passive of modal verbs.
- Read the text aloud to practice pronunciation.

Self-Assessment

Yes

No

- I talk about Oracle features.
- I recommend Oracle features.
- I explain Oracle great features.
- I write about Oracle.

☐	☐

Target Words

- **Among** (preposition): Another way to say "between"
e.g. You can set it to activate: undo management, recovery manager, server memory management, among others
- **Simplify** (verb): To make something simply.
e.g. management of files can be simplified to rebalance the storage according to your needs.
- **Momentarily** (adverb): In just a small amount of time
e.g. We will list them below and momentarily explain their purpose.
- **Programme** (verb): to configure or set a program.
e.g. Your database can be programmed to automatically make routine tasks in order to reducing the complexity of space.
- **Schedule** (verb): To organize and set events in a specific time or schedule.
e.g. it allows scheduling tasks such as statistics collection and space recovery.
- **Occur** (verb): To happen.
e.g. It is made of a collection of functions and procedures that lets administrators and developers to control when and where several tasks would occur.

Learning Points

The Passive of Modal Verbs: Can

We use the **passive voice** when we want to emphasize in the action and not in the person who does it

Passive voice can be used with any modal verb; we are going to focus on **can** this time.

Can shares similar uses with **may** and **might**, the latest two are more formal, and **can** is used to express possibility, permission or ability

Structure

Subject + can be + verb in past participle + complement

Examples

*This jar **can be opened** easily*

*This item **can only be bought** in the online store*

Examples

- *Your database can be programmed to automatically make routine tasks in order to reducing the complexity of space, memory storage and administration*
- *Many of the manageability features can be fixed to work automatically*
- *Performance analysis can be easily done for any period of time in the system*

Negative questions to ask for agreement

Negative questions are used looking for confirmation and reaffirmation.

In English, it is common to make questions in a negative form to look for the agreement of the person we are speaking

Examples

A: **Don't** you think we should divide this work accordingly?

B: I think you are right

A: Carol, **didn't** you go to the cinemas last night?

B: Yeah, I did. Why?

Examples

- *Don't you think that Oracle Database is simply amazing?*
- *It sounds a little hard at the beginning, but aren't you looking for giving them all a try?*
